

# Unity Orchestrator<sup>SP</sup>

## Unprecedented Visibility and Control for Multi-tenant SD-WAN Deployments

The Silver Peak Unity Orchestrator<sup>SP</sup> is a multi-tenant orchestration platform that enables service providers to globally manage and monitor the performance of Unity Edge Connect<sup>SP</sup> SD-WAN solutions deployed by customers.

## Accelerate Managed SD-WAN Deployments

Orchestrator<sup>SP</sup> delivers granular visibility into thousands of customer branch deployments for both data center and cloud WAN applications. It provides the unique ability to centrally configure and manage secure SD-WAN deployments for each individual customer, while providing customized, segregated views and reporting.

## Orchestrator<sup>SP</sup> Features

- **Multi-tenant management and administration:** Scales to support SD-WAN deployments for hundreds to thousands of enterprise customers
- **Flexible licensing and billing:** Provides easy license management for provisioning licenses, flexible upgrade or downgrade licenses and scheduling for each customer, and a variety of billing options, including perpetual and pay-as-you-go alternatives
- **Enterprise-class features for each customer:** Generates granular real-time and historical reports for monitoring each customer’s network and application performance
- **Easy on-boarding of new customers:** Enables rapid deployment of new sites without any specialized IT expertise required at the branch

- **Upgrade customers on any schedule, anytime:** Unique customer instances ensure flexibility in tailoring deployments to unique customer requirements
- **Segregation of customer data bases:** Securely isolates each individual customer SD-WAN configuration and performance statistics providing the security today’s enterprise customers need to assure robust security
- **Secure and Single Sign-on access:** Ensures privacy and security per customer instance

## Orchestrator<sup>SP</sup> Benefits

Orchestrator<sup>SP</sup> provides an unprecedented level of operational efficiency by minimizing order-to-deployment touch points with an intuitive user interface and centralizing configuration. This provides visibility into customer networks and rapid response for troubleshooting and support issue resolution.
