

Silver Peak Wanstart Program

Silver Peak developed the WANstart program to facilitate the deployment of data acceleration in complex enterprise environments. By combining best practice tools and advice with 24-hour access to Silver Peak product experts, WANstart makes it fast and easy to roll out Silver Peak appliances and Global Management System (GMS).

What You Get:

Silver Peak's trained staff is ready to guide you through the various challenges associated with network design, configuration, turn-up, and troubleshooting. You will receive dedicated attention from an in-house team of experts, with access to a wide array of knowledge resources.

WANstart includes access to Silver Peak deployment tools such as:

- Deployment Planning Guide
- Project Planning Guide
- Best Practices Documentation
- Computer-Based Training
- Product Documentation

WANstart Consultants will:

- Work with you to choose the optimal architecture for your deployment
- Review your existing architecture
- Share best practices
- Help redesign your network to maximize gains from deploying Silver Peak appliances
- Configure a handful of your appliances to "show you the ropes"
- Develop configuration templates to automate additional deployments.

WANstart Consultants:

WANstart Consultants are members of Silver Peak's world-class field-service organization who leverage real-world exposure to customer networks as a foundation for developing and

leading best practice solutions. All WANstart Consultants have extensive networking backgrounds that include various industry accreditations, and are well versed at configuring and supporting Silver Peak products.

After WANstart:

The ultimate goal of WANstart, combined with SPX Certification, is to make you self-sufficient in the deployment of data acceleration. The combination of these two programs will arm you with the knowledge and tools to:

- Manage additional rollouts of Silver Peak Appliances
- Deploy Silver Peak Appliances in remote and unstaffed sites
- Determine the ROI of your investment
- Monitor your existing deployments for further optimization opportunities and capacity planning.

“WANstart proved extremely valuable to our deployment efforts, helping us to maximize the performance of our WAN with minimal configuration headaches. It easily saved us several weeks of time and effort.”

— IT Director, Software Manufacturer
