Flexible Deployment Models

- > Unity EdgeConnect™ Virtual (EC-V) – Download and install EdgeConnect from anywhere in the world. The software runs on all common hypervisors, including VMware ESXi, Microsoft Hyper-V, Citrix XenServer, and KVM. Silver Peak customers who have an IaaS presence in AWS, Microsoft Azure, Oracle Cloud Infrastructure or Google Cloud Platform can deploy EdgeConnect within their hosted cloud environment.
- > EdgeConnect Physical (EC) – For enterprises that are not virtualized in the branch, choose one of six EdgeConnect hardware appliance models for plug-and-play deployment.

Unity EdgeConnect Subscription Licensing

Silver Peak Unity EdgeConnect licenses are sold as a subscription, in either single or multi-year increments (1, 2, 3, 4, 5 and 7 years) at multiple bandwidth tiers.

EdgeConnect includes Unity Orchestrator™ that can be installed either on premise or in a customer's virtual private cloud. An optional cloud-hosted Orchestrator license provides a highly reliable alternative deployment model supporting all Orchestrator features without the complexity of managing on premise virtual compute and storage resources. Unity Boost™ WAN Optimization is an optional WAN Optimization performance pack that may be ordered and deployed flexibly to sites that require application acceleration. Boost is offered in 100Mbps or 10G blocks.
