The following table summarizes the recommended resources required by Orchestrator when deployed on a standard server.

- These requirements do not include the resources needed by the hypervisor itself, which will require additional dedicated core, memory, and storage to operate.
- You must reserve CPU and memory for your virtual appliances to function optimally.
- For non-VMware hypervisors, an extra core should be set aside for hypervisor tasks.
- It is necessary to ensure that the CPU hardware Virtualization Technology (VT) feature is enabled in the BIOS, and the BIOS should be set to maximize performance. Please refer to the CPU vendor's documentation for guidance on enabling VT in the BIOS.
- When using vSphere 4.x, a VMware vSphere Enterprise Plus license is needed for a virtual machine to use 8 or more virtual processors.
- When using Hyper-V, Windows Server 2012 is needed for a virtual machine to use 8 or more virtual processors.
